

Scene Set Control Plates

Screwless Scene Set Plates

This line of screwless Scene Set and Control Plates is available in custom colours as well as white and brushed stainless steel finish as standard.

They are available in 4-button, 2-button and 7-button configuration.

Our Scene Set Control Plates are used with our plug in and hardwired control modules to permit the control of different lighting groups at different levels.

From the plate you can call *Scenes 1 - 4, Raise, Lower, and Off*. The *Off* button can also be programmed to a scene value. You press and hold buttons 1 - 4 to call scenes 5 - 8. Functions are identical on the Architrave Plate except that that there are 2 fewer buttons.

Control plates have blue LED back lighting for location and scene identification, and scenes can be programmed via hand-held programmer, wirelessly via Bluetooth from a PC, or by using the buttons (eliminating the need for specialist equipment).

These Scene Set Plates match our Switch Plates and conform to a standard single-gang plate profile, fitting 25mm surface or flush mounted back boxes.

A Wandsworth Group Series 2 range of control plate is used and the standard finish is brushed stainless steel. However, any other plate finish from the Series 2 range can be substituted. Switch Plates from our architrave range can also be requested.

Connection to the system is by 4-core cable with a push on-male plug to the scene set plate and an RJ12 connector to the LCM.
