

DATA SHEET

SCENE PLATE REMOTE

The **ecoLUX** 'Hand held Scene Plate' remote performs the functions of a scene set control plate. This is used with our plug in and hardwired control modules to control different lighting groups at different levels as well as some other non-lighting functions, such as electric blinds.

Working with any scene set control plate, the seven buttons on this remote mimic the buttons on the scene set control plate. Using the remote you can call Scenes 1 - 4, Raise, Lower, and Off. The Off button can also be programmed to a scene value. By pressing and holding buttons 1 - 4 you call scenes 5 - 8.

The remote requires no commissioning, but it requires a programmed scene set control plate to work with.

DATA SHEET

REMOTE PIR CONTROLLER

The **ecoLUX** PIR Remote Control is highly flexible and communicates with the lighting control network through a PIR. Upto 8 buttons can be configured to do any control task that can be performed by the PIR from scene changes, over rides or dimming, to heating or window blinds.

The PIR Remote can be programmed with an address from 1 to 16 so that it is tied uniquely to a particular PIR and will not interfere with or communicate through any other PIR. In an open plan office environment, for instance, the remote will only control a particular zone and will not interfere with lights in an adjacent area.

The remote can be supplied with a custom label so that if one button was programmed to, say, turn on the heating, this function would be marked as such on the label. Also, if fewer functions than 4 were required then buttons would simply be eliminated from the label graphics.
